SUMMARY

Frontend-focused full-stack engineer with almost 5 years building React/Next.js products in high-growth startups, extending into Node.js/Nest.js for full ownership of features end-to-end. Shipped **4 production dashboards in 1.5 weeks**, took a **0→1 EC BOQ module to production in 2 months**, and cut UI defects **70%** and feature build time **60%** through reusable component architecture (Material React Table, TanStack Query, ECharts). Also comfortable owning the backend slice, from REST API contracts to PostgreSQL and JWT-based auth.

WORK EXPERIENCE

Software Development Engineer 2

Dec 2025 – May 2026

Hyperverge

Bengaluru

- Delivered full-stack workflow and notification features across frontend and backend, including @mention alerts for task comments (in-app, email, Slack) and fixes for external counterparty approval using token-based access validation → **cut approval turnaround ~12%**.
- Built a customizable multi-chart dashboard feature where users can add, resize, and reposition up to **50 charts** across multiple dashboards, with per-chart metric, currency, granularity, sorting, and filter options that adapt dynamically to the chart type selected.
- Enhanced the CLM product experience by building approval reordering and searchable condition/user selectors, and improved shared UI coverage through Storybook.
- Improved document and template workflows by fixing doc-landing activity log state issues, adding skeleton loaders, and implementing public-to-private template conversion with unit tests and E2E coverage.

Software Engineer – Fullstack

Feb 2023 – Dec 2025

Accacia

Bengaluru (Remote)

- Shipped **4 MVP dashboards in 1.5 weeks** and **3 emissions-tracking systems in 72 hours with zero production rollbacks**, enabling real-time carbon reporting across 3+ asset types.
- Built EC BOQ (0→1) with editable tables, live calculators, and charts, partnering on PostgreSQL/SQL schema design and REST API contracts → **delivered to production in 2 months, cut integration issues 25%**.
- Introduced TanStack Query for API caching/sync across the app → **cut boilerplate 40%** and improved perceived latency.
- Built reusable Material React Table components for large-dataset views → **reduced feature build time 60%** and standardized UX.
- Implemented the real-time ECharts visualization layer → **lowered UI defect rate 70%** via live updates.
- Mentored 2 junior engineers, led code reviews and component standards → **team velocity increased 20%**.
- Built On1y Homes (React + Supabase), an AI interior design platform → **reached 500+ active users in month 1**.

Senior Software Development Engineer

Jun 2022 – Dec 2022

KAFQA

Bengaluru

- Integrated Mixpanel with **100% coverage** of critical click events → enabled data-driven roadmap decisions.
- Established the foundation of a CRM platform with 15+ reusable React components → **reducing future dev time by 30%**.
- Optimized frontend performance via refactors and state management → **page load –15%**.

Software Development Engineer

Jul 2021 – May 2022

Kickdrum

Bengaluru

- Delivered a meeting-recording bot UI in React.js → **automated attendance, cutting manual attendance time 50%**.
- Built Chrome extension features that auto-summarized discussions → **cutting document creation time 40%** through auto-highlighting.
- Designed and tested an Azure YAML CI/CD pipeline for a .NET 3 project → **100% pass rate across 50+ SonarQube test scenarios, with 85%+ test coverage**.

SKILLS

Frontend → React.js, Next.js, TypeScript, Tailwind CSS

Languages → JavaScript, Python, HTML5, CSS/SCSS

Backend → Node.js/Nest.js, REST API, PostgreSQL, JWT/Auth

Cloud & DevOps → Git, AWS, Azure, CI/CD (YAML), SonarQube

Testing & Analytics → Jest, Playwright, Mixpanel, Figma

AI / LLM → Generative AI, LangChain, RAG

PROJECTS

TalentLens AI: LLM-Powered Candidate ATS (RAG + LangChain)

Sep 2025

Stack: RAG, LangChain, Groq (Llama 3.1), Chroma, BM25, Streamlit

[Live Demo](#)

- Built an AI-powered ATS with hybrid retrieval (BM25 + embeddings) that critiques resumes line-by-line and generates JD-tailored rewrites with line-level citations.
- Designed structured LLM pipelines in LangChain for JSON-based outputs, enabling consistent reasoning and line-level citations.

EDUCATION & CERTIFICATION

KiiT University, BTech in Computer Science and Communication Engineering

2017 – 2021

IBM – Generative AI Engineering Certification

Sep 2025
